base

compact, sophisticated design

It's no secret: the wardrobes in our base collection are a must for anyone who appreciates interlübke's customary quality. Not only do they feature impressive functionality and aesthetics, but they can also be configured for maximum convenience and use of space. Reason enough for us to continuously refine the initial design, which is now available with overlay doors and additional interior features such as shelves, drawers and pull-outs. The all-white wardrobes boast a particularly puristic design on both the interior and exterior. For a more accentuated look, the outer surfaces and fronts can be designed in any matt lacquer col-

our. In addition to white, the body and interior compartments are available in metallic silver-grey. Thanks to the innovative perforated rail system with 5-cm hole spacing, all interior compartment elements can be flexibly adjusted. But what really sets the wardrobes apart are their intricate features and special details, such as the shiny aluminium handle strips, the plateau handles in all colours, and the self-retracting drawers with cushioned stop mechanism – to name just a few.

Design: Rolf Heide and Peter Kräling

Interior compartments

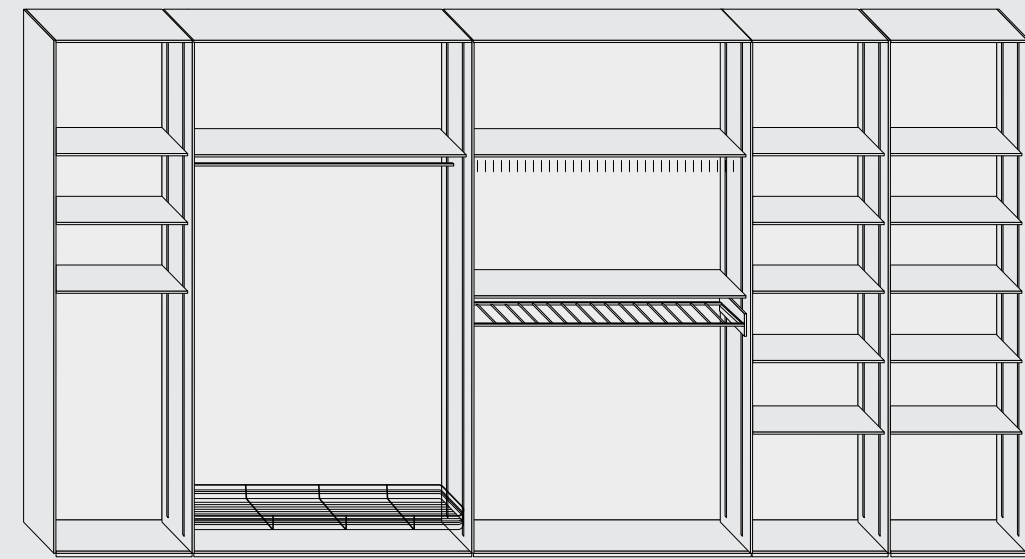

- Interior shelf
- Interior shelf with hanging rail
- Extending trouser holder
- Extending shoe holder
- Shoe rack
- Linen basket
- Interior drawer
- Interior mirror
- Storage box with lid

1. Element design

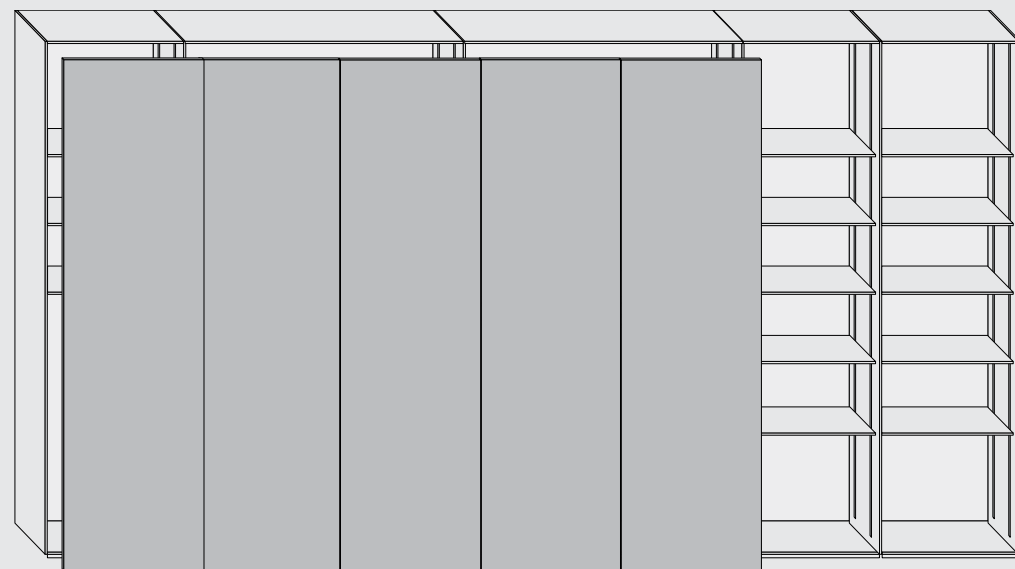

- Start with the left outside wall.
- Plan the wardrobe elements and middle walls successively from left to right until you have the desired width for your wardrobe.
- Finish your planning with a right outside wall.

2. Interior design

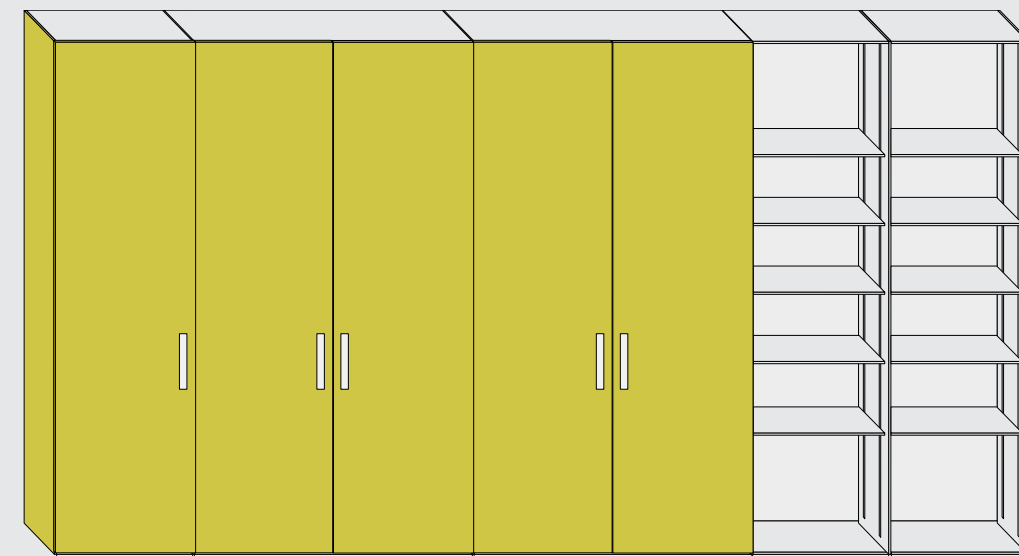

- Design the inside of the wardrobe elements with interior compartments such as shelves, hanging rails, linen baskets and trouser holders (p. 8/9).
- If you want to illuminate certain wardrobe elements, the lighting must be planned at this stage, as the elements have to be fitted with a conductor strip.

3. Front design

- Decide which (if any) wardrobe elements should be enclosed with a front (i.e. a single or double hinged door).
- In the case of single hinged doors, decide which side you want the door hinges to be on.

4. Colours and handles

- To finish, decide on the colour and the type of handles for the front.
- The outer surface of the outside wall is optionally available in an interlückte matt lacquer finish.

Interior compartments

All **interior compartments** are mounted to the perforated rails on the inside of the wardrobe walls.

The adjustment distance is 5.0 cm.

The possible hinge positions of the doors do not affect the planning of the interior compartments.

Shelf

The maximum load is 30.0 kg.

Interior drawer

Sets of 1–4 drawers.

The handle is stainless steel coloured and 4.5 cm wide.

A shelf must be incorporated as a top cover.

The interior drawer can be extended to approximately 11.0 cm and features a cushioned stop mechanism.

Storage box with lid

Upholstered with light-grey material.

W 44.0 × H 26.0 × D 48.0 cm

Shelf with hanging rail

The hanging rail is mounted on the underside of the shelf. The metal pole is stainless steel coloured.

The maximum load is 40.0 kg.

Hanging rail

Attached to perforated rail, the metal rail is coated in a stainless steel colour.

The maximum load is 40.0 kg.

Shoe rack

With compartments for 2 rows of shoes, non-extending, stainless steel coloured.

Extending trouser holder

With bars to hang up trousers, stainless steel coloured.

The holder can be fully extended and features a cushioned stop mechanism. A shelf can be added above the trouser holder.

In wardrobes with a width of 48.0 cm, the hanger has 4 poles; hangers with a width of 98.0 cm have 10 poles.

Linen basket

Made of metal, stainless steel coloured (086).

The linen basket can be extended to approximately 11.0 cm and features a cushioned stop mechanism.

A shelf can be incorporated over the top as a cover.

Extending shoe holder

With compartments for 2 rows of shoes, stainless steel coloured.

The extending shoe holder can be fully extended and features a cushioned stop mechanism.

Interior mirror

The interior mirror is mounted on the hinged door.

The position can be freely chosen on site.

H 160.6 × B 30.0 cm

Handles

Right handle strip
in shiny aluminium (019).
The handle is flush-mounted on the edge of the door.

26.0 cm long

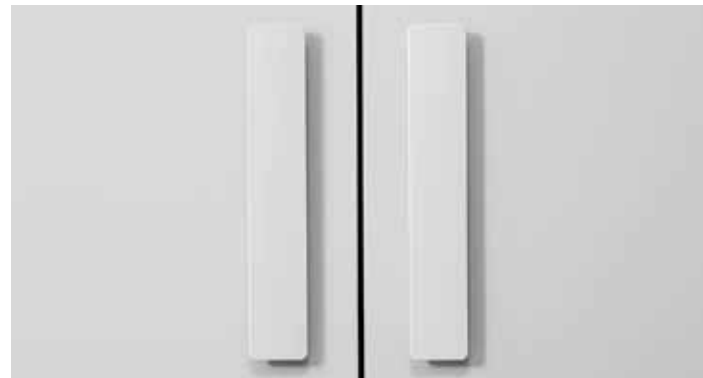

Left and right handle strip

Right plateau handle
in all matt lacquer colours.
Base in shiny aluminium (019).

26.0 cm long

Plateau handle left and right

Lighting

The wardrobe interior can be illuminated by incorporating shelves with LED lights.

The power is supplied through a special conductor strip, which cannot be installed after production.

The wardrobe elements that are to be fitted with lighting must therefore be determined during the planning.

In the case of elements with hinged doors, the lights are activated by a motion sensor on the lights themselves. The power supply sets (basic and extended) are built into the base.

For more planning information, see page 8.

The **LED lighting** is incorporated into the front part of the shelf and illuminates the area below the shelf. A hanging rail can also be fitted to the shelf if desired.

The **conductor strip** is located behind the front perforated rail.

Colours

Matt lacquer for wardrobe elements, outer and middle walls and lacquered interior compartments

M02 crystal-white

M11 silver-grey metallic

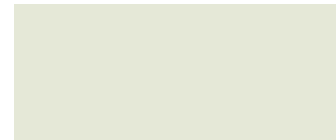

Matt lacquer for fronts and (optionally) for the outer surface of outside walls.

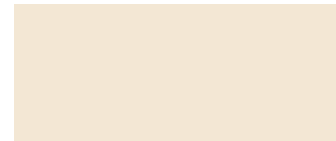

M02 crystal-white

M47 cherry-red

M90 powder

M91 sandalwood

M93 lemon

M94 mustard

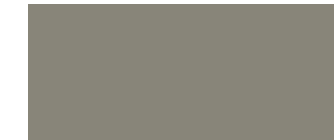

M95 curry

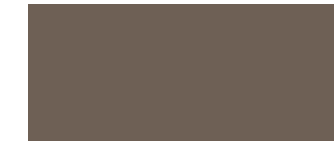

M13 aluminium metallic

M12 nickel metallic

M11 silver-grey metallic

M10 bronze metallic

M09 gold metallic

Individual and customised lacquer

Individual lacquer

Order your custom colour as a matt lacquer based on the RAL, NCS and SIKKENS colour fans.

interlücke will process the order without matching the colour tone against a control sample beforehand.

This rule only applies for matt lacquer, not neon or metallic colours.

Customised lacquer

Choose your colour on the basis of the RAL, NCS, SIKKENS colour fans or your own sample (minimum size DIN A4) and interlücke will produce the lacquer for you after approval of the control sample.

The delivery date is determined once the sample is approved.

High-gloss lacquer not offered!
